

Desheng Kong

Analyst Programmer | Applied AI and Backend Systems

+61 413 439 408 | desheng.kong408@gmail.com | deshengkong.com | linkedin.com/in/desheng-kong

SUMMARY

Analyst Programmer focused on backend engineering, server-side systems and applied AI integration. Builds secure Python and FastAPI services, REST APIs and AI-enabled workflows, with experience in Linux deployment, authentication, monitoring and modern front-end development.

CORE SKILLS

Backend and AI: Python, FastAPI, REST APIs, LLM integration, embeddings, RAG, speech services

Systems: Linux, authentication, access control, API-key management, rate limiting, logging and monitoring

Front end: React, Next.js, TypeScript, Tailwind CSS and responsive UI development

WORK EXPERIENCE

Analyst Programmer

Sep 2026 - Present

Ultimate AI Australia | Full-time | Melbourne, VIC (On-site)

- Analyse requirements and design secure backend services, API gateways and AI-enabled applications.
- Develop and maintain Python and FastAPI backend services with reliable APIs and maintainable system architecture.
- Integrate approved LLM, embedding, RAG, speech and related AI services into applications.
- Implement authentication, access controls, API-key management, rate limiting, logging and monitoring; support Linux deployments, performance testing and incident troubleshooting.

Frontend Developer

Jan 2026 - Sep 2026

Ultimaite Strata Robotics | Contract | Melbourne, VIC (On-site)

- Contributed to front-end development and website optimisation, delivering updates efficiently while maintaining code quality and user experience.
- Used AI-assisted tools to understand existing codebases, implement changes and improve structure, readability and development efficiency.
- Built and refined responsive layouts from design requirements, improving projects through rapid iteration, problem-solving and close attention to detail.

SELECTED WORK

Virtual Concierge | Field-tested integration

Connected venue-specific knowledge retrieval with a voice and touchscreen kiosk, worked on speech output and an asynchronous interaction pipeline, and supported field validation.

UAI API Customer Portal | Demonstration

Defined the customer journey across access, usage and request testing, shaped responsive success and failure states, and kept the public demo limited to synthetic data.

EDUCATION

QUT (Queensland University of Technology)

Bachelor of Games and Interactive Environments (Software Development) | Feb 2020 - Nov 2023
